

Sprint review 3

2013-10-08

1. What has been done?
 - a. It's now possible to pick a custom time or date for both reminders and time (for events).
 - b. The UI has gotten the navigation drawer back (together with swipeable tabs).
 - c. A new view for inspecting autogenerated blocks and add new ones has been added to the navigation drawer.
 - d. Added an autogenerator for events
 - e. Tests for event and task adapters implemented.
 - f. A checkbox has been added to list items so you can mark them as complete and then they are deleted.
 - g. The "create/edit a new/old task" view looks a lot better.
 - h. Items in the lists act more natural.
2. Is there any goals that hasn't been reached, and if so, why?
 - a. There's still no GPS reminder.
 - b. The location box when adding new task/activity isn't yet connected to Google Maps.
 - c. Still not possible to sort what categories to display due to it taking time implementing the gui.
 - d. The auto generator is still not completed. Current goal is added support for "time windows", i.e. so that you can generate only on working hours or leisure time.
 - e. Edit tasks still not fully implemented.
 - f. Checkbox's listener isn't firing on click.
3. Are there any actions that are necessary to prevent future discrepancies?

None.
4. Any additional comments?
 - a. Next sprint will be focused on adding as many new features as possible.
