

Sprint review 4

2013-10-14

1. What has been done?
 - a. It's now possible to set reminders for a specific location.
 - b. It's now possible to fully edit a task/event, the only exception being categories.
 - c. On-the-fly predictions for different locations.
 - d. Date/time spinners in is now smarter. If the user chooses a custom date that's equal to some predefined value (tomorrow, evening etc). the predefined value gets selected, instead of a new one being created and added to the spinner.
 - e. It is now possible to choose what categories to display in task list. The current categories are one default category for every task and one that is determined by the Task's name.
 - f. Pomodoro notifications now have sound, vibration and working click navigation.
 - g. Auto-generation now works and is tested
2. Is there any goals that hasn't been reached, and if so, why?
 - a. It is still not possible for the user to set custom categories (with colors).
 - b. A list object part of a hidden category is currently only set to invisible while still taking space in the task list.
 - c. Pick category not implemented in event list but that should be easy now that it works in task list
 - d. Auto-generation has not been connected to graphical interface
3. Are there any actions that are necessary to prevent future discrepancies?
 - a.
4. Any additional comments?
 - a.
