Mentor meeting #1 - 17th of September 2013

- The documentation is looking good
- Fix sprint backlog for this week (and maybe a preliminary backlog for the coming weeks)
- Split features into smaller tasks that are easy for an outsider to understand
- Start thinking about testing
- Tests - use cases - put on an alarm → see if it goes off on time → test
- Big plus for our meeting protocols
- Work log - start recording a work log, administering hours spent working & with what
- Make sure we have *clear and thorough* documentation
- Document the effectiveness of our working methods (pair programming, etc)
- Document and justify our project methods
