Mentor meeting #2 - 24th of September 2013

- Sprint backlog 1 wasn't included in release, include future backlogs in the release
- Include an .apk for future releases
- Include documentation for sprint reviews and future sprint backlogs in time for releases
- Include "acceptance level" for features in product/sprint backlogs
- Create a requirements specification for which phones should be able to run the app (text file)
- Fix license (ie GPL3, text file)
- Work on more java docs/comments in code
- No need for test-driven development
- JUnit tests are recommended ("decent" code coverage (100% preferred if it's easy to test), use common sense)
- Can use manual tests when code tests aren't realistically feasible
- We need to show that we know how testing works
- Upload sprint backlogs
- Use week-specific product backlogs
- Pivotal tracker - can be used for product backlogs (check it out)
- Can divide work for expert areas if we want to
- Remember to document working roles (product owner, scrum master, etc)
- Can experiment with different working conditions
- Make sure we get stuff done!
- Focus on implementing features
- Never work on the same branch - branch out to different branches and communicate to avoid conflicts
- Send a mail if we have any questions
- Not a big deal if you miss a mentor meeting (as long as the group knows)
